

## Dynamic Inventory for Retail

Using our AGR Dynamics Inventory solution, you can rest assured that the correct inventory levels are calculated across all channels to support how your customers want to shop, where they want to shop, and when they want to shop.

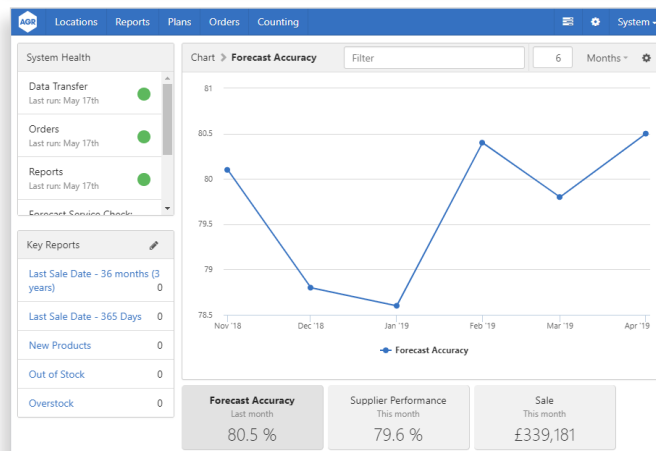

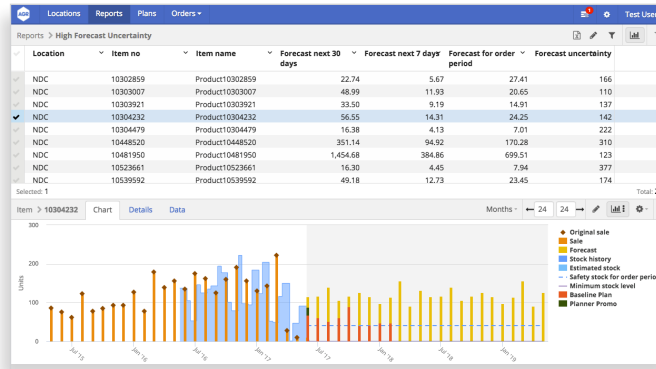

Whether its lost sales due to incorrect inventory levels, cannibalization of inventory, or just too many products on hand, all of these are easily managed with our Dynamic Inventory solution. Reacting quickly to sales trends is more important than ever in today's retail world and having a solution that quickly identifies potential inventory issues allows you the piece of mind to know that you will have the right inventory at the right place at the right time for all your customers, in store and online.

### Allocations

AGR takes a strategic approach to allocations, taking demand trends and fluctuations into account to ensure the more appropriate distribution to guarantee optimum sell-through.

### Demand Forecasting

Using the best forecasting tools available, AGR Dynamics' Retail Dynamics solution allows you to plan strategically, knowing that your allocation and replenishment processes will run smoothly and align with your financial plan.

### Features:

- Demand Forecasting - automatically selects the best forecast
- Trend and seasonality
- Lost sales and uplift (promotions or external causes)
- Plan by service level
- Constraint-based purchase orders

### Inventory Optimization

Inventory planning is a leading cause of time loss in an organization due to manual processes, data entry, and lack of visibility to your inventory. The Inventory Optimization solution effortlessly allows you to see where your inventory is or isn't and manage it effectively.

### Replenishment

Automated replenishment activities free up time for you to strategically plan your product offering. With our Retail Dynamics Replenishment solution, you can rest assured that your inventory levels are accurately maintained.
